**Title of the motion,
amendment, nomination**

H2 Fittings - Backstay

Topics concerned

	Constitution		Events
x	Class Rules		Technical Issues
	Regatta Regulations		General Policies
	Nomination		

Current Rule:

H2. Fittings – Backstay – 1 cleat on each side of tank for backstay. The backstay cleats may be placed within a box measuring 1900mm and 2150mm aft of the Measurement Beam and the between the lower edge of the deck non skid and a line 180mm below this edge on the cockpit moulding.

Proposed New Rule:

H2. Fittings – Backstay – 1 cleat (with an optional second cleat mounted on a bracket) on each side of tank for backstay control line. The backstay cleats may be placed within a box measuring 1900mm and 2150mm aft of the Measurement Beam and the between the lower edge of the deck non skid and a line 180mm below this edge on the cockpit moulding.

Reason:

Housekeeping - This previously approved rule change “1 or 2 cleats on brackets on each side of tank” for the backstay was described in the traveller section, possibly because both cleats are typically side by side and controlled by the same Measurement Box. The backstay cleats should be described in the backstay section only.
